Job Application for Software Engineer

Dear Mr./Ms./Dr. LastName,

About Me

Current Software Development Engineer at a unicorn start-up company, Innovaccer, working in Product Engineering Team to develop the production-ready Backend micro-services. I am an Information Technology graduate from Jaypee Institute of Information Technology, Noida. I worked as a Software Engineering Intern at Innovaccer. I also worked as a Software Engineering Intern at an Investor Relations and Equity Research Company, Internet Bull Report. I am working every day to build, extend, optimize and refactor Backend architecture and its core services.

Why Google?

There are many reasons I want to join Google.
Firstly, I think Google will be making good use of my skill-set. I'll be working with really great people - people who can get the job done, who act rationally, who don't make life difficult when it doesn't have to be.Therefore, I'll enjoy going to work.
Secondly, I've never seen engineering infrastructure as solid as that at Google. I used Google products before joining Google, I continue to use them, most of everybody I know uses them, and they make my life better. Therefore, I feel that I'm making the world a better place by working here.
Lastly, Google pays me enough to support my lifestyle and provide medical insurance, and many other perks.

Why Me?

Honestly, I possess all the technical skills and experience that you're looking for. I'm pretty confident that I am the best candidate for this job role. I am a self-motivated person, and I try to exceed my superior's expectations with high-quality work. Being a fast learner, I quickly pick up business knowledge related to my project. Lastly, I would like to add that I work well both as an individual contributor and also as a team member. I am praised as adaptable and enthusiastic by my peers. My abilities such as teamwork and critical thinking and problem-solving skills can fill the software engineer role at Google.

Sincerely,

Nikhil Bhasin
